

## Education

---

**Rochester Institute of Technology**, Bachelor of Science in Computer Engineering, 3.75 GPA 2008-2013  
Minors in Web Development and Electrical Engineering  
Honors Program: Council Treasurer, Lead Orientation Mentor, and member  
RIT Clubs: President and Vice-President of Running Club, President of Quidditch Club

## Skills

---

AngularJS, Grunt, Karma/Jasmine, JavaScript/ES6, TypeScript, HTML, CSS/SASS, Git, NodeJS

## Experience and Volunteering

---

**Developer, ITX Corp** 2017-current

- Assemble an enterprise AngularJS application from the ground up with my team, as part of a larger ecosystem of applications, to replace a legacy Flash experience.
- Collaborate with the client stakeholder and product owner to develop thorough requirements.
- Investigate the project domain and regularly uncover many edge cases and missed requirements the product owner and client stakeholder were unaware of.
- Successfully collaborate in a primarily remote environment (85% of my coworkers are in Latin America)
- Work as a peer alongside my Tech Lead to perform code reviews, make technical decisions, and work with the client.
- Mentor junior developers by performing in-depth code reviews, frequent informal lessons, and acting as the “go-to” person on my team when someone needs help.
- Participate in frequent technical team leadership discussions as the sole non-Tech Lead member from the team of 20 developers, due to my extensive experience and knowledge.

**Software Engineer, Brand Networks** 2015-2017

- Architected and implemented a medium-scale AngularJS application for use by national brands to post across thousands of social media accounts at the same time.
- Assisted with feature planning within an Agile team environment to determine product direction.
- Considered paths other than the “happy path”, to ensure optimal user experience.
- Introduced TypeScript to the project to take advantage of modern language features and reduce type errors.
- Learned relevant legacy design patterns to maintain legacy codebases and add new features for high-priority clients.

**UI Developer, EffectiveUI** 2013-2015

- Managed scope and expectations directly with client as senior AngularJS developer on multiple projects. Architected new AngularJS and build environments and delivering completed builds to client.
- Proactively identified risks or problems and escalated as needed.
- Developed clean, well-documented code in HTML, CSS, and JavaScript for medium-scale web applications.
- Addressed cross browser compatibility issues, while keeping accessibility in mind, to provide a consistent experience for all users.
